

Vedo che, per giustificare la difesa dei valori della democrazia e dello stato di diritto, siamo arrivati a giustificare le punizioni di massa indiscriminate. L'unica domanda che rimane è: quali altri passi verso l'abisso?

@fsyloslab | Francesco Sylos Labini | 15.10.2023

With several recent advances and funding, Covid nasal vaccines now have momentum.

@EricTopol | Eric Topol | 14.10.2023

The answer to sustaining the NHS lies outside the NHS, with people, patients, communities, relationships, compassion, and love, all of which are available in abundance.

Big blood savings: large trial in JAMA shows taking less blood for lab testing reduces #transfusions in intensive care

@OttawaHospital | The Ottawa Hospital | 12.10.2023

Multiple treatments are effective against severe covid. Unfortunately they are largely unavailable across a multitude of countries - several I think are not even imported.

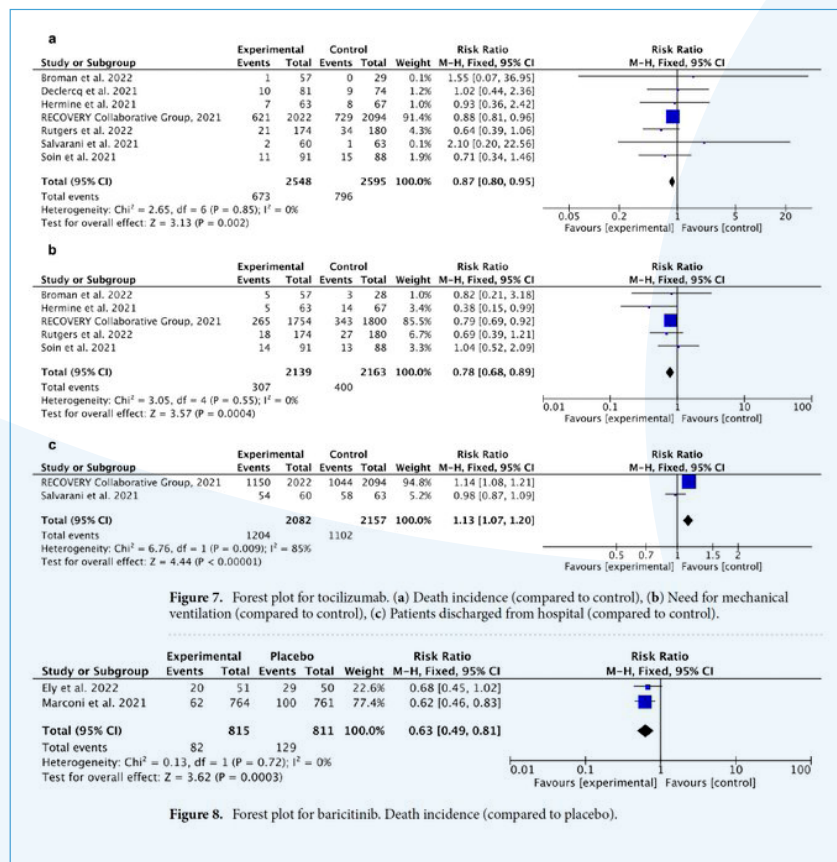

Figure 8. Forest plot for baricitinib. Death incidence (compared to placebo).

It was so important for me when my non Jewish colleague asked how I was doing, and we mourned together for Israeli victims of Hamas, Palestinian victims, and ongoing Israel state brutality.

@DrZackaryBerger | Zackary Berger | 10.10.2023

I am an Israeli Jew. This is probably the worst week of my life. And yet today of all days it bears repeating: the only way to end this cycle is by working for freedom and dignity for all. For all. On all sides, our blood is the same color and our tears taste the same.

@AmiDar | Ami Dar | 10.10.2023

In conflict, civilians always pay the highest price. War is not the answer. We need peace.

@UN | United Nations | 9.10.2023

To this the legendary Abba Eban once commented that UN peacekeeping forces are like an umbrella that is given on a lovely summer day only to be immediately taken away on the first sign of rain

@EinatWilf | Einat Wilf | 7.10.2023

200 years of publishing practice-changing research. 200 years of being "more than a medical journal". 200 years of moving the dial on health. 200 years of The Lancet.

@TheLancet | The Lancet | 6.10.2023

New: A growing number of casinos in Cambodia, Laos and Myanmar are engaging in large-scale money laundering, facilitating cyberfraud that is costing victims in America and abroad billions of dollars, according to new research by the United Nations.

Reducing low value care: opportunities and challenges for Choosing Wisely campaigns

Analysis  
Reducing low value care: opportunities and challenges for Choosing Wisely campaigns

Jeremy M Grimshaw<sup>1,2</sup>, Wendy Levinson<sup>3,4</sup>

**Introduction**  
Low value care harms patients (due to adverse events of treatments or secondary unwanted work), overburdens healthcare professionals (potentially contributing to burnout), threatens healthcare systems (threatening sustainability due to inefficient use of scarce healthcare resources) and damages the climate (due to negative environmental impact on provision of low value care).<sup>1</sup> Low value care is a global phenomenon affecting both high-resource and low-resource settings (and if anything is more harmful in low-resource settings). While the problem of low value care has been recognised for many years, until recently it received insufficient attention.  
Choosing Wisely (CW) was founded a decade ago in the USA and initially focused on clinician engagement to raise awareness of the problem of low value care and its negative impacts. It aims to change healthcare professional culture making stewardship of healthcare resources a recommendations to de-implement low value care). If CW campaigns are to maintain their credibility and considerable momentum, it is essential that they actively engage in and promote de-implementation activities working with healthcare system partners.  
**The challenge of de-implementation**  
Over the past two decades, there has been rapid development of implementation and behavioural sciences. A key question is what can be learnt from implementation science—crucially, is implementation of effective care similar or different to de-implementation of low value care?  
Patey et al undertook a critical interpretive synthesis exploring whether theories of behaviour change distinguish between starting and stopping behaviours and whether they suggest different strategies for starting and stopping behaviours.<sup>2</sup> She observed that only operant learning theory principles suggest different strategies for stopping
